

Description

Search all instances of a module type within the Portal for a specific keyword and show the results. This makes searching for a word or link that needs replacing, of which you do not know the exact location, much easier! Supported core modules that can be searched are: Text/HTML, Announcements, FAQs, Form and List, Links.

The screenshot shows a web interface titled "VDWWD_KeywordSearch". It features a section "Search in module types:" with a list of checkboxes. The checked items are "Text/HTML", "Announcements", "Form and List", and "VDWWD_OpenGraph". Below this is a "Keyword:" label followed by an empty text input field. At the bottom left is a blue "Search" button.

Module settings

Module can be used by all Roles: Enable this option to allow non Admins the ability to search the site. This is disabled by default because the module searches for the keyword without taking assigned module roles into account.

Basic Settings

- Module can be used by all Roles
